DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Van der Gracht et al. (US 5,546,198).

Van der Gracht discloses a holographic viewing device comprising a frame and a computer-generated hologram fitted in said frame (see Fig. 1), said computer-generated hologram constructed as a transmission Fourier transform hologram (claim 2), wherein said computer-generated hologram comprises minuscule cells having pitches with a reconstruction image area, and an input image pattern reconstructed at said wavelength is recorded in said computer-generated hologram in such a way that a light portion of said input image pattern (i.e. NOEL pattern) overlaps a center of said reconstruction image area (see Fig. 2B). The reference does not teach the reconstruction image defined by -

Art Unit: 2872

and + diffracted light i.e., the grating pitches being twice as large as said pitches cells.

However, generating images of one particular diffraction order is well known in computer-generated holograms.

It would have been obvious, at the time the invention was made, to a person having ordinary skill in the art to reconstruct the image in the +/- first order only in order to avoid reconstruction of more than one image (i.e. NOEL pattern) in the field of view.

Regarding claims 2 and 4, Van der Gracht discloses the holographic viewing device comprising a phase hologram having a multivalued phase distribution (claim 9).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Athale et al. (US 6,452,699)

Gerspach et al. (US 20040030732 A1)

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fayez G. Assaf whose telephone number is (571) 272-2307. The examiner can normally be reached on 8-5 M-F.

Application/Control Number: 10/632,830

Art Unit: 2872

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on (571) 272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
